DETAILED ACTION
EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kenneth Nigon on 07/08/04.

The application has been amended as follows:

22. (Amend) The method of claim 21, wherein :

the monolithic stabilized electroabsorption modulator further includes an input optical tap;

step (a) further includes the step of supplying the bias voltage to the input optical tap;

step (e) further includes the step of detecting an input tap current of the input optical tap; and

step (f) includes the step of calculating the extinction ratio of the electroabsorption modulator based on the input tap current and the output tap current measured in step (e).

Allowable Subject Matter

Claims 1-22 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art taken either singularity or in combination fails to anticipate or fairly suggest the limitations of the independent claim, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims 1, 6, 14, 20, with the allowable features being; forming a waveguide layer having a waveguide index different from the substrate index of refraction on the top surface of the substrate, the waveguide layer including an electroabsorption portion adjacent to the output optical tap portion(claim 1); detecting an input tap current of the input optical tap and an output tap current of the output optical tap(claim 6); supplying a bias voltage to the electroabsorption modulator and the output optical tap, the bias voltage having a voltage level(claim 14); varying the temperature control voltage based on the temperature measured to regulate the temperature of the monolithic stabilized electroabsorption modulator to operating temperature(claim 20). Therefore claims 1-22 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bischoff et al.(U.S. Patent No. 6,512,860) and Ferguson et al.(U.S. Patent No. 6,160,930) are pertinent to the application since they pertain to EAM with a waveguide with an optical input and optical output.
